

Smoke Test Report

Information

Web Application : Forkify

Build Version : 1.0.0

1. Test Information:

Application Under Test	Forkify Recipe Application
URL	https://forkify.qa-academy.eu/
Test Type	Smoke Test — Critical Flow
Execution Date	May 5, 2026
Browser / Environment	Google Chrome Version 147.0.7727.138 / Windows 11
Tester	K.DIP
Scope	Application launch, Search (valid/invalid/empty), Pagination, Recipe detail view, Servings adjustment, Bookmarks (add/view/remove/persist), Add Recipe modal, Remove Reciepe , Direction , Source link, Responsive layout, Deep-link routing and more

2. Executive Summary

A smoke test covering 18 test cases across 8 functional areas of the Forkify application was executed on May 5, 2026. The application demonstrated stable core functionality with an overall pass rate of 89%. No blocking failures were identified. Two warnings were raised for minor UI/UX issues that do not prevent core workflow completion.

3. Detailed Test Results

ID	Area	Test Step	Expected	Actual	Status	Notes
TC-01	App Launch	Navigate to https://forkify.qa-academy.eu/	Homepage loads; search bar, logo, and 'Add recipe' button visible	Application loads successfully. Search bar, header with logo and Add Recipe / Bookmarks icons are displayed	PASS	Load time acceptable
TC-02	Search	Type 'pizza' in search bar and click Search	Results list appears with recipe cards matching the query	Nothing Showing	FAIL	Results count is not showing
TC-03	Search	Clear search input and click Search	Validation message shown; no API request fired	Infinite loading	FAIL	Server side problem
TC-04	Search	Search for 'xyzqwertynonexistent'	Empty-state message shown to user	No recipe cards returned; message 'No recipes found for your query. Please try again!'	PASS	Graceful empty state
TC-05	Pagination	With results loaded, click the on any food	Next page of results displayed; active page indicator updates	reflect current page correctly	PASS	Previous page also verified
TC-06	Recipe Detail	Click any recipe card from results	Recipe detail pane opens with title, image, time, servings, ingredients and Bookmarks	Detail panel renders: title, publisher, cook time, servings slider, and full ingredients list shown	PASS	Image loads
TC-07	Servings	Click '+' button on serving count in recipe detail	Serving count increments; ingredient quantities scale proportionally	Serving count increased from 4 to 5	PASS	Math calculation correct
TC-08	Servings	Click '-' button on serving count	Count decrements; ingredients scale down; cannot go below 1	Count decrements; ingredients scale down; cannot go below 1	PASS	
TC-09	Bookmarks	Open a recipe detail and click the bookmark icon	Bookmark icon fills/activates; recipe saved to bookmarks panel	Bookmark icon toggles to filled state; recipe appears in bookmark dropdown immediately	PASS	Icon state change visible
TC-10	Bookmarks	Click the 'Bookmarks' icon in the header	Bookmarks dropdown opens showing all bookmarked recipes	Not Showing more than 10 in bookmarks icon	FAIL	
TC-11	Bookmarks	With recipe open, click the active bookmark icon again	Bookmark removed; icon reverts to outline; item gone from panel	Bookmark icon toggled off; recipe removed from bookmarks panel on next open	PASS	Unbookmark flow verified
TC-12	Bookmarks	Bookmark a recipe, then refresh the page (F5)	Bookmarked recipe still present after page reload	Bookmarks restored from localStorage on reload; bookmarked recipe still listed	PASS	localStorage working

Forkify Application — Smoke Test Report

TC-13	Add Recipe	Click 'Add Recipe' button in header	Modal/form opens with input fields for recipe details	Add Recipe modal opens with fields: Title, URL, Image URL, Publisher, Prep Time, Servings, and Ingredients	PASS	Modal overlay visible
TC-14	Add Recipe	Fill all required fields with valid data and click 'Upload'	Success message shown; new recipe added to bookmarks with user icon	Success message 'Recipe was successfully uploaded!' appears; recipe added to bookmarks with a user/person icon distinguishing it	PASS	User recipe icon shown
TC-15	Add Recipe	Submit the Add Recipe form with blank 'Title' field	Validation error shown; form not submitted	Form shows 'Wrong input format. Correct format: 'Quantity:Unit:Description" or browser-native required field validation prevents submission	WARN	Validation msg could be clearer
TC-16	Recipe Detail	Click 'Directions' link in recipe detail pane	External source page opens in a new browser tab	Source URL opens in new tab (target=_blank) correctly	PASS	External link verified
TC-17	Responsive	Resize browser to 375px width (mobile breakpoint)	Layout adapts; no horizontal scroll; controls accessible	Layout reflows; search bar and results stack vertically; minor overlap of header icons at very narrow widths but usable	WARN	Minor header overlap at 375px
TC-18	Navigation	Copy a recipe URL from address bar and open in new tab	Recipe detail loads directly from URL hash/ID parameter	Recipe detail loads correctly when URL with recipe ID hash is pasted directly in new tab	PASS	URL routing works
TC-19	Add Recipe	Add Another Recipe	Should Add another recipe	Can't add another recipe without reload	FAIL	
TC-20	Buttons	Remove Button for removing unwanted food	Remove Button removes unwanted food	Remove Button Not Found	FAIL	
TC-21	Event Handling	No unwanted Event handling	No button will change unwanted events	Serving increment and decrement button change the spelling of minute	FAIL	
TC-22	Directions	Press the Direction Button will redirect to food page	Direction button will redirect to respected pages	Direction button will redirect to respected page	PASS	

4. Issues & Observations

4.1 Warnings (Non-Blocking)

ID	Area	Observation	Recommendation
W-01	Add Recipe	Validation error message for missing/incorrect ingredient format is generic and may confuse users unfamiliar with the 'Qty:Unit:Desc' pattern.	Update the error message to explicitly state the expected format with an example, e.g., '1:cup:flour'. Consider adding inline field hints.
W-02	Responsive	At 375px viewport width, header icons (Add Recipe + Bookmarks) have minor overlap/crowding, reducing tap target accuracy on mobile.	Apply responsive CSS adjustments to header icon spacing for viewports below 400px. Consider a hamburger-style menu for mobile.

4.2 Failures (Blocking)

ID	Area	Observation	Recommendation
F-01	Add Recipe	Can't add another recipe after one submission	N number of food can added without blocking
F-02	Event Handeling	One event helps to change another unwanted event	One event will change there relevant state of the event
F-03	Button	No Food Remove Button	Remove button should implement for remove unwanted Food
F-04	Bookmarks	Book marks can't showing more than 10 food	Should implement See more button
F-05	Search	Search button load Infinite time and can't find food using key word	Should not load infinite time

5. Functional Area Coverage

Functional Area	Cases Run	Pass	Warn	Fail
App Launch	1	1	0	0
Search	3	2	0	1
Pagination	1	1	0	0
Recipe Detail	2	2	0	0
Servings	2	2	0	0
Bookmarks	4	3	0	1

Forkify Application — Smoke Test Report

Add Recipe	4	2	1	1
Responsive	1	0	1	0
Navigation	1	1	0	0
Event Handeling	1	0	0	1
Direction	1	1	0	0

6. Conclusion & Recommendation

The Forkify application successfully passed all 22 critical smoke test cases. The two warnings raised (W-01 and W-02) are low-severity UX issues and 6 Failed issues which are critical that create impact on core functionality. The application is considered UNSTABLE for continued functional and regression testing.
